

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A liquid crystal display device, comprising:
a first substrate with a multi-domain pattern, wherein said first substrate having a common electrode layer and said multi domain pattern composed of a frame pattern and a pixel-dividing pattern; and
a second substrate with a plurality of strip patterns having slit structures; wherein said second substrate having a matrix composed of a plurality of transistors, wherein said plurality if the strip patterns and said multi-domain pattern divide pixels of said liquid crystal device to form a multi-domain homeotropic alignment mode liquid crystal display device, wherein said two substrate are fabricated and liquid crystals are injected into herein.
2. (Previously Presented) The device in claim 1, wherein said first and second substrates are glass substrates.
3. (Cancelled)
4. (Currently Amended) The device in claim 31, which further comprises a plurality of pixel electrodes by the side of said plurality of transistors respectively connects electrically with drains of said transistors.
5. (Original) The device in claim 4, wherein said strip patterns are formed on said pixel electrodes.
6. (Original) The device in claim 5, wherein said pixel electrodes are transparent.
- 7.-9. (Cancelled)
10. (Previously Presented) The device in claim 1, wherein said pixel-dividing pattern is selected from the group consisting of +, H, ++, and #.

11. (Previously Presented) The device in claim 1, wherein said pixel-dividing pattern and said frame pattern are overlapped with each other.

12. (Cancelled)

13. (Previously Presented) The device in claim 12, which further comprises a plurality of pixel electrodes by the side of said plurality of transistors respectively connects electrically with drains of said transistors.

14. (Original) The device in claim 13, wherein said multi-domain pattern is formed on said pixel electrodes.

15. (Original) The device in claim 13, wherein said pixel electrodes are transparent.

16. (Cancelled)

17. (Previously Presented) The device in claim 14, wherein said contact pattern is selected from the group consisting of +, H, ++, and #.

18. (Previously Presented) The device in claim 14, wherein said pixel-dividing pattern and said frame pattern are overlapped with each other.

19. – 20. (Cancelled)

21. (Original) The device in claim 2, wherein each of said plurality of strip patterns divides domains of said multi-domain pattern into equal parts.

22. (Original) The device in claim 2, wherein each domain of said multi-domain pattern is square.

23. (Original) The device in claim 22, wherein each of said plurality of strip patterns is parallel to one side of said square domain.

24. (Original) The device in claim 23, wherein said side of said square domain is the long side.

25. (Currently Amended) A liquid crystal display device, comprising:
- a first substrate having ~~a plurality of transistors~~ a common electrode layer on a first surface of said first substrate;
 - a second substrate having ~~a common electrode layer~~ a plurality of transistors on a first surface of said second substrate;
 - two polarizers, one of said two polarizers being attached to a second surface of said first substrate, the other polarizer being attached to a second surface of said second substrate; and
 - a multi-domain pattern formed on said first substrate for dividing pixels complementary to said ~~plurality of transistors~~ into more than two domains, wherein said multi-domain pattern is composed of a frame pattern and a contact pattern, a plurality of strip patterns formed on said second substrate, wherein structures of said strip patterns are slits; wherein when said first substrate and said second substrate are fabricated and liquid crystals are injected into therein, said strip patterns and said multi-domain pattern dividing said pixels to form a multi-domain homeotropic alignment mode liquid crystal display device.
